INFORMATION DISCLOSURE STATEMENT

The Commissioner
United States Patent
and Trademark Office
Washington, DC 20231

Dear Sir:

The applicants wish to bring to the attention of the Examiner

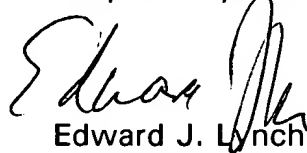

U.S. Patent No. 3,834,394 (Hunter *et al.*) which is listed on the attached

PTO-1449. A copy of the listed reference is enclosed for the Examiner's consideration.

Hunter *et al.* describes an occlusion catheter which has a balloon designed to be expanded to occlude a venous passageway and to be disengaged from the catheter shaft when it is inflated, so as to remain in the blood vessel in the inflated state to prevent the passage of thrombus. Note that there is no distal shaft section having an inner lumen which is disengageable from the proximal shaft section having an inner lumen in fluid communication with the inner lumen of the distal shaft section. There is no suggestion of the catheter structure of the present invention or the method of using the catheter.

Applicants believe that the pending claims of the present application define patentable subject matter and respectfully request favorable consideration and an early allowance thereof.

Respectfully submitted,

Edward J. Lynch
